EDUCATION

IT UNIVERSITY OF COPENHAGEN

Copenhagen, Denmark

Bachelor of Science (BSc), Data Science

2022-2025

• Relevant Coursework: Algorithms, Machine Learning, Databases, Large-Scale Data Analysis, Data Visualisation

PROFESSIONAL EXPERIENCE

Simplesoft OÜ

Remote

Junior Data Scientist

September 2024 - Present

• Designed and maintained a daily analytics pipeline exporting event-based .csv data from Google Analytics into BigQuery, supporting Looker Studio visualizations and business performance tracking.

• Developed SQL scripts to extract prompts and behavioral segments from RevenueCat’s export DB, enhancing product-led insights.

• Ensured GDPR compliance across all reporting pipelines and external data integrations.

• Created and advised on dynamic dashboards in Looker Studio, improving app engagement monitoring across >10 key user interaction events.

JustDev OÜ

Remote

Junior Data Scientist

December 2024 - Present

• Developed components of an AI-driven news pipeline aggregating and parsing global RSS feeds (>150/day), enabling near real-time geopolitical risk scoring.

• Co-developed a real-time threat alerting system based on NLP-derived military, political, and economic signals.

• Contributed to backend data architecture and validation framework using custom scoring rules and historical conflict datasets for system benchmarking.

Southwestern Advantage

Alberta, Canada

Sales Representative

June 2024 - September 2024

• Generated over \$26,000 in total sales revenue through direct sales, using a door-to-door approach.

• Demonstrated entrepreneurial mindset, time management, and performance under pressure.

Invisible Technologies Inc.

Remote

Data Operator

Aug 2023 - May 2024

• Executed comprehensive data analysis, cleaning, and validation processes using custom-built algorithms to ensure data accuracy and integrity.

SELECTED PROJECTS

Large-Scale Yelp Review Analysis — *Apache Spark, scikit-learn, Pandas*

Used Spark to analyze 6M+ Yelp reviews, identified influencer impact and authenticity language, and built logistic and linear regression models to predict review scores.

MLOps Pipeline with Go and Python — *Dagger, GitHub Actions, MLflow*

Transformed a monolithic Python ML project into a modular pipeline with automated testing, model training, and artifact management. Integrated CI/CD using GitHub Actions and container-based execution.

Clothing Image Classification — *PyTorch, PCA, Naïve Bayes, Neural Networks*

Applied machine learning techniques to classify grayscale fashion images using custom feature extraction, dimensionality reduction, and multiple classifiers.

Comparison of DistilBERT to LSTM using CheckList — *PyTorch, NumPy, NLP*

Compared a fine-tuned DistilBERT transformer model with a custom LSTM on sentiment classification tasks using the CheckList evaluation framework. Analyzed model robustness to negation, paraphrasing, and named entity changes, revealing gaps in generalization and syntactic sensitivity.

ADDITIONAL INFORMATION

Languages: Russian (native), English (fluent), Estonian (fluent), Danish (beginner)
